HOLO FINISHES

The survival of any species is very related to the capacity to adapt to the environment. **Alucoil**® has been inspired by the ease of chameleons to change their image to create this range of holo finishes, where a finish becomes two and even three different colours depending on how the light affects the façade.

REALITY EFFECT

ALUNATURAL & MIRROR FINISHES

Because sometimes there is no better finish than the one given by our surrounding, the range of mirror and Alunatural finishes offer different types of reflection, sharpness and even colours depending on the desired target.

CUSTOMIZED FINISHES

Why be satisfied with any kind of finish if we can match the desired texture with the maximum coating quality?
The range of customized colours reproduces the touch of ceramics, the oxide of metals, the texture of basalt... all with the durability and lightweight of a composite panel.

ANODIZED LOOK FINISHES

To anodize is to protect, but also to beautify the aluminium. Alucoil has a wide portfolio of finishes that match anodized finishes, keeping the folding and curving properties of composite panels. There are no limits to elegance.
